

Data sources

Scopus

Scopus is Elsevier's abstract and citation database of peer-reviewed literature, covering 77.3 million documents published in over 39,000 journals, book series, and conference proceedings by some 5,000 publishers.

Scopus coverage is multilingual and global: approximately 46% of titles in Scopus are published in languages other than English (or published in both English and another language). In addition, more than half of Scopus content originates from outside North America, representing many countries in Europe, Latin America, Africa, and the Asia Pacific region.

Scopus coverage is also inclusive across all major research fields, with 13,300 titles in the physical sciences, 14,500 in the health sciences, 7,300 in the life sciences, and 12,500 in the social sciences (the latter including some 4,000 arts and humanities-related titles). Titles covered are predominantly serial publications (journals, trade journals, book series, and conference material), but considerable numbers of conference papers are also covered from stand-alone proceedings volumes (a major dissemination mechanism, particularly in the computer sciences). Acknowledging that a great deal of important literature in all fields (especially in the social sciences as well as the arts and humanities) is published in books, Scopus has begun to increase book coverage in 2013. As of 2018, Scopus includes 1.75 million book items, 400,000 of which are in the social sciences and 290,000 of which are in the arts and humanities.

SciVal

Elsevier's new generation of SciVal offers quick, easy access to the research performance of over 12,000 research institutions and 230 nations worldwide. A ready-to-use solution with unparalleled power and flexibility, SciVal enables you to navigate the world of research and devise an optimal plan to drive and analyze your performance.

SciVal builds on Elsevier's extensive experience over several years, working with many leading institutions worldwide via SciVal Spotlight and SciVal Strata.

Data source: SciVal is based on output and usage data from Scopus, the world's largest abstract and citation database for peer-reviewed publications.

SciVal uses Scopus data from 1996 to the present, covering over 48 million records in 21,000 serials from 5,000 publishers. These include:

- more than 22,000 peer-reviewed journals
- 360 trade publications
- 1,100 book series
- 5.5 million conference papers

SciVal offers a broad spectrum of industry-accepted and easy-to-interpret metrics including Snowball Metrics, which are global standard metrics defined and agreed upon by higher education institutions for institutional strategic decision-making through benchmarking. Metrics in SciVal help institutions measure their or a country's productivity, citation impact, collaboration, subject discipline, and more.

PatentSight

PatentSight provides unique, reliable, and relevant insights into the patent landscape for decision-makers and patent experts in the fields of benchmarking, research and development strategy, trend-scouting, merger and acquisition, licensing, and patent portfolio optimization.

It provides simple measures that can help assess the breadth, strength, and commercial importance of a patent or patent family and yield insights into potential commercial importance. It also allows for geographic and company-based analysis of patent portfolios to help judge market penetration and readiness on a country-by-country basis.

The patent databases INPADOC and DOCDB provided by the European Patent Office (EPO) are the central patent data sources for the PatentSight database. Furthermore, we add legal status information from national offices (United States and Japan) to the data stream, as well as subsidiary information from corporate structure databases. In addition, all patent offices around the world provide patent data with the EPO, so we cover all relevant patent data worldwide. The PatentSight database currently covers patent data from more than 80 patent authorities.

Because PatentSight is part of LexisNexis, our database also contains IP DataDirect (IPDD). IPDD from LexisNexis provides worldwide patent information in bulk. The entire IPDD content with improved bibliographic and legal status information will be integrated into the PatentSight database by the end of 2021.

Elsevier funding institutional

This platform offers a competitive edge, providing a holistic view of the research funding landscape and using a single solution that combines over 18,000 active funding opportunities with information on over three million awarded research grants from a wide range of funders.

Funding Institutional offers access to the following content:

- more than 3500 government and private funding organizations, including 2000 funders in the United States
- over 18,000 active funding opportunities

- greater than US \$98 billion worth of active funding opportunity
- more than 3 million awarded grants
- greater than US \$1.6 trillion worth of awarded grants
